

IOT MAJOR PROJECT – **SENTIMENT BUTTONS**

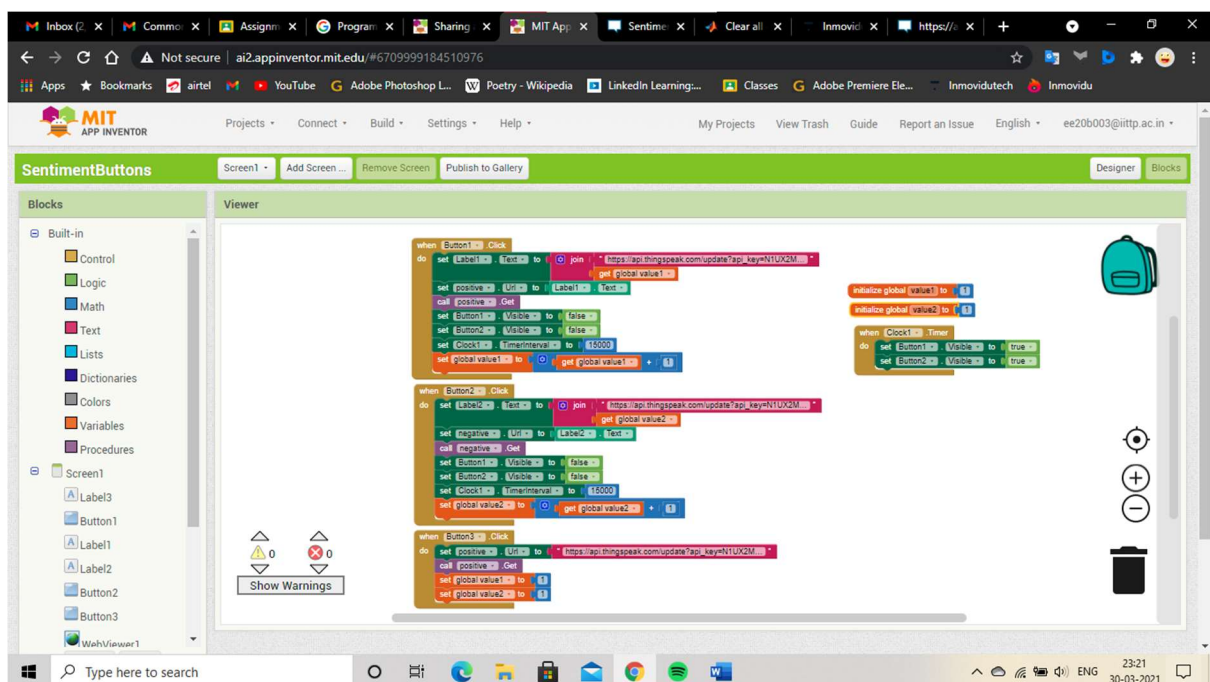

Description:

- The app contains three buttons – ‘Positive:)’, ‘Negative :(‘, and ‘Reset!’
- The Thingspeak channel (Sentiment Buttons) contains two fields - Positive and Negative, with their corresponding numerical widgets – Positive Count and Negative Count.
- When the Positive Button (Negative Button) is clicked:
 - A value is sent to the thingspeak channel’s Positive (Negative) field. Starting from 1, the value is one more than the previous value.
 - Both the buttons get disabled for 15 seconds.
- When the Reset Button is clicked, value = 0 is sent to both the fields of the channel, and the count again starts from 1 in both fields.
- The numerical widgets can also be seen in the app below the buttons.
